Adding your cPanel email to Apple Mail on Mac

Step 1: Open **Mail** on your Mac. If you have not yet set up an email account, you will be taken directly to the **Add Account** window. If you are adding an additional account, you will have to

select Add Account from the Mail menu.

•	Ś.	Mail	File	Edit	View	
		About Mail				
		Preferences 光, Accounts				
		Add Account				
		Services			•	
		Hide	Mail		ЖН	
		Hide	other w All	rs 7	ΞЖН	
		Quit	Mail		жQ	

Step 2: Click on **Mail > Add Account.** A window will appear with the options iCloud, Exchange and more. Select Add Other Mail Account... and click **Continue**

Choose a mail account to add

🔿 🖪 Exchange						
○ Google [.]						
○ YAHOO!						
○ Aol.						
 Add Other Mail Account 						
? Cancel Co	ntinue					

Step 3: Enter your email account information and click Create.

Email Address: John@yourdomain.com	Full Name:	John Doe
	Email Address:	John@yourdomain.com
Password:	Password:	•••••

Step 4: Mail will now attempt to connect to the server. You will most likely receive an error "Unable to verify account name or password", and a new dialog box will appear.

Step 5: Next you will be asked to fill out the following information with the correct information for your specific email address.

Email Address: youremail@yourdomainname.com Username: youremail@yourdomainname.com Password: your email account's password. Account Type: select IMAP Incoming Mail Server: zeb.zebralovehost.com Outgoing Mail Server: zeb.zebralovehost.com

Step 6: Click Sign In Step 7: You will then be asked to choose which apps you'd like to attach to this email account to. Select email and any others you'd like and click Done.

*If for some reason you're still unable to connect follow these troubleshooting steps below.

Step 1: With Mail open, click Mail and select Preferences.

Step 2: Click Accounts options in the top bar.Step 3: Click the Server Settings tab.

* To edit the Incoming/Outgoing ports, UN-check Automatically manage connection settings.
